Solekai Systems successfully completes AUSTAR's MyStar Project

20 April 2009 – SAN DIEGO, CA – Solekai Systems Corporation (Solekai) has completed its work on the MyStar digital video recorder (DVR) set-top box for Austar United Communications Limited (AUSTAR).

Solekai assisted the AUSTAR team by creating comprehensive testing plans and tests for the test and certification phase of MyStar's development. MyStar is the first personal digital recorder available in Australia that contains two digital free-to-air tuners, enabling viewers to watch their local, digital free-to-air channels seamlessly without having to purchase a separate digital set-top box. Solekai has also been supporting release updates to the service since its successful launch.

Dean Walters, Chief Information Officer of AUSTAR is pleased with the work that Solekai has delivered. "This project has been a truly collaborative effort. We needed a team to be able to jump into a development which was already in progress and Solekai's experts did just that. Their engineers were able to quickly engage with our MyStar team, without extensive ramp up time. Solekai has been an integral part of MyStar's ongoing development and success."

The President of Solekai, Martin Caniff said: "Working with AUSTAR has been rewarding for Solekai on multiple levels. It's great to extend our set-top box expertise into new regions and networks, and the MyStar set-top box is a technically innovative project that leveraged the depth and breadth of our digital video experience."

About Solekai Systems Corporation
